-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3753

Claim 1 is objected to in that there is no antecedent basis for "the unit".

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hankison et al in view of Jennings.

Hankison et al show a water bypass valve where the seals 52 and 54 are at ends of the central bore in the bypass position of Figure 1 and seal 52 is at the middle of the bore in the service position of Figure 2. The claim recitations of service and tank merely relate to intended use and are given no weight. Hankison et al do not show a geared actuator, though. Jennings shows a multiway piston valve with a hand actuated rack and pinion actuator that travels 180 degrees between detents 120, 122. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have used such an actuator as shown by Jennings to move the valve of Hankison et al to provide an increased force, for example, or a detent at the operating positions.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
